Anti-vibrating wall panel structure for building - has number of anti-vibrating materials which are attached to outer surface of panel frame such that anti-vibrating materials connects pillar and girders

MATSUSIJIYA ELECTRIC WORKS LTD 96.06.24 96JP-163393  
(98.01.13) E04B 1/98

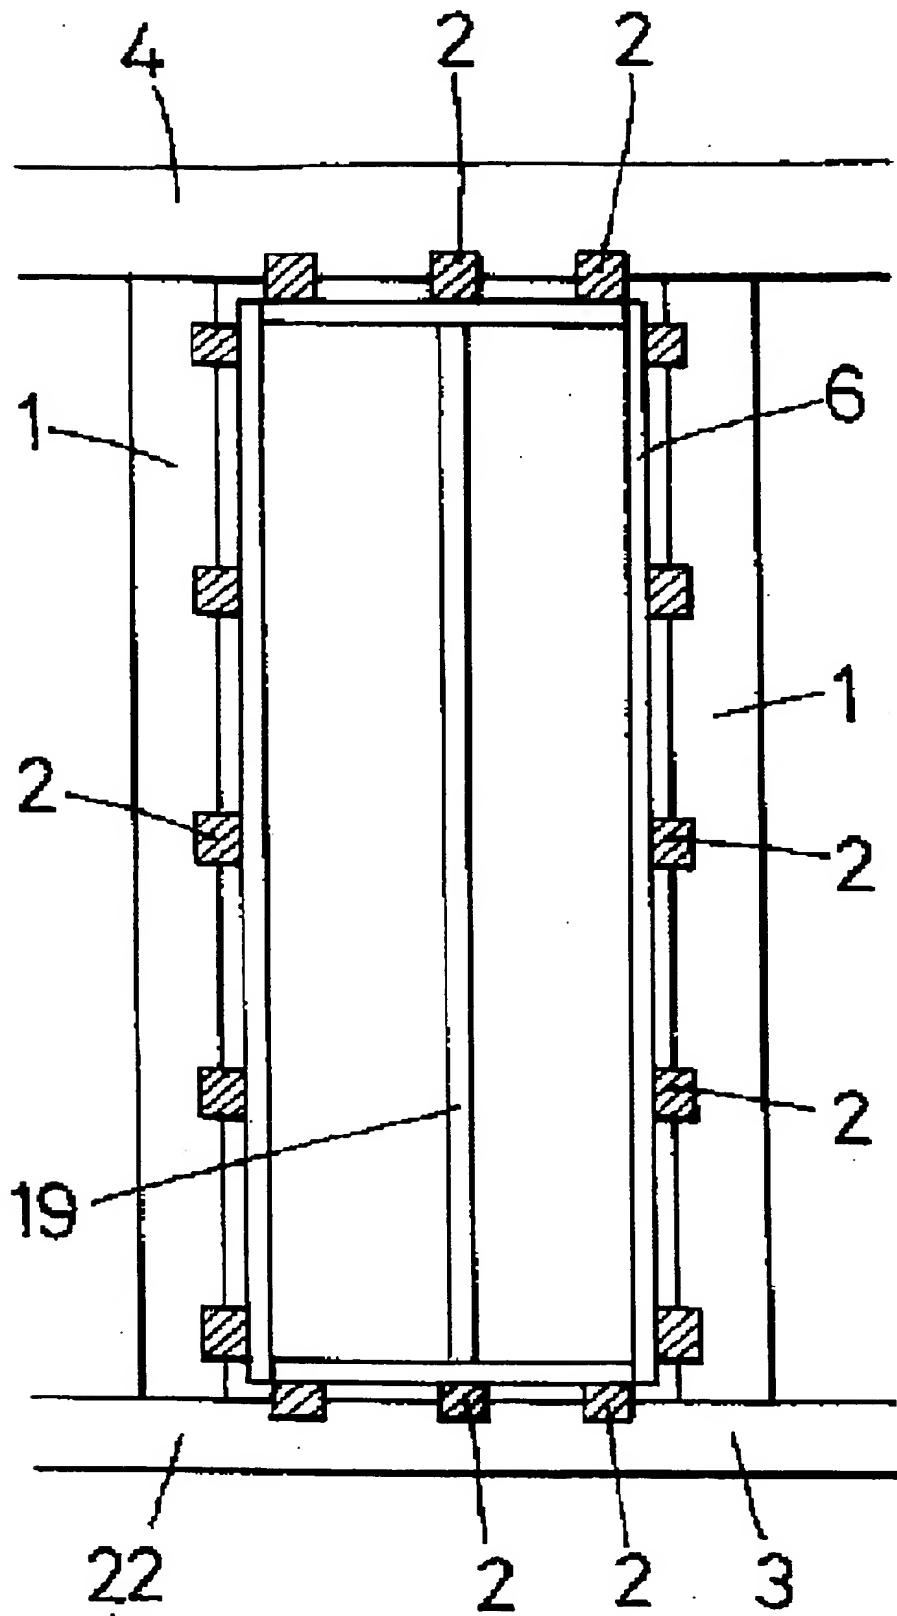

The structure has a framework (22) which is comprised of number of girders coupled to the upper edge of a pillar (1). A panel frame (6) is attached to the framework.

A number of anti-vibrating materials (2) are attached to the outer surface of the panel frame such that the materials connect the pillar and girders.

ADVANTAGE - Reduces spread of vibration generated by weight impact from upstairs to downstairs. (6pp Dwg.No.1/9)
